Buffalo Filter Launches VisiClear™ Surgical Smoke Plume Evacuator
Cutting Edge Acute Care Smoke Plume Evacuator Featuring SafePortTechnology™

Lancaster, NY (March 27, 2014) – Buffalo Filter is pleased to announce the VisiClear™ Surgical Smoke Plume Evacuator. VisiClear offers the latest in technology, resulting in a quiet, safe, and intuitive surgical smoke plume evacuator unlike any other on the market.

Today, VisiClear sets a benchmark for surgical smoke plume evacuation with its innovative design. Combining Whisper Technology™ for ultra-quiet operation, a compact shelf design and touch screen convenience, VisiClear is designed to be our most advanced acute care offering.

Features:

SafePort Technology™ – Our unique port closure design ensures that there is reduced risk of staff coming in contact with a contaminated port when inserting or removing plume evacuation accessories or when cleaning the unit.

Intuitive Color Touch Screen – Easy to use and requires minimal training.

Whisper Technology™ – Advanced sound control design ensures ultra-quiet operation with unprecedented sound quality.

Sleek Shelf Design – Lies flat on a surgical boom shelf with isolation feet that do not require hard attachment. Designed to accommodate stacking.

State of-the-Art Electronics – Features a 32-bit microprocessor with embedded color LCD driver to optimize speed and power.

“With a number of new innovative technologies, VisiClear represents Buffalo Filter’s latest advancement in surgical plume evacuation,” states Joe Lynch, Vice President of Sales and Marketing. “With a sleek compact shelf design, Whisper Technology™, powerful suction, SafePort Technology™, and an interactive color touch screen, VisiClear™ demonstrates our commitment to deliver cutting edge surgical smoke plume evacuation systems.”

About Buffalo Filter

Buffalo Filter is a world leading medical device manufacturer and supplier of surgical smoke plume evacuation equipment. Our products are used to evacuate and filter hazardous surgical smoke plume created during over 95% of all surgical procedures. Proven to contain toxic gases, live cellular material (including blood fragments) and viruses, this plume may also cause respiratory and eye irritation or nausea in healthcare professionals and may create visual problems for the surgeon.
