Buffalo Filter Showcases Surgical Smoke Plume Solutions for Veterinarians at NAVC 2014

Lancaster, NY (January 14, 2014) — Buffalo Filter will be exhibiting its extensive line of Surgical Smoke Plume Evacuation products at NAVC January 19 through January 22 in Booth 2418 at the Gaylord Palms, Orlando Florida.

Laser surgical instruments are commonplace in today's veterinary practice. When laser instruments are used they vaporize tissue and produce an unwanted by-product commonly known as surgical smoke plume. OSHA says such surgical plumes "have contents similar to other smoke plumes, including carbon monoxide, poly-aromatic hydrocarbons, and a variety of trace toxic gases." Through a significant number of research articles, studies, and published standards, it is well documented that surgical plume must be evacuated.

At Buffalo Filter, we're continually focused on providing our veterinarian customers with innovative designs and technologies to address the surgical plume challenges they face. Stop by Booth 2418 to find out more .Ask about our special pricing on our most popular pre-assembled veterinary kits as well as a chance to win a Kindle Fire.

"We have always found **NAVC** to be an excellent venue to illustrate why leading veterinarians rely on Buffalo Filter for plume evacuation," states Joe Lynch, Vice President of Marketing. "We encourage everyone to visit Buffalo Filter to meet with our experts and learn more about our latest technology advancements."

About Buffalo Filter

Buffalo Filter is a world leading medical device manufacturer and supplier of surgical smoke evacuation equipment. Our products are used to evacuate and filter hazardous smoke plume and/or aerosols created during over 95% of all surgical procedures. Proven to contain toxic gases, live cellular material (including blood fragments) and viruses, this plume may also cause respiratory and eye irritation or nausea in healthcare professionals and may create visual problems for the surgeon.
